In today's uncertain economic climate, business decision makers are under immense pressure to deliver value. Organizations are tightening their belts and aiming for slower spend in all areas of the business. At the same time, these organizations cannot afford to compromise productivity and efficiency. History has shown that organizations that continue to invest smartly in challenging times often emerge as the dominant player coming out of recessions.

Microsoft SharePoint Products and Technologies can help you to reduce Total Cost of Ownership (TCO) and maximize Return-On-Investment (ROI) for your Microsoft Dynamics enterprise solution. SharePoint Products and Technologies provide a comprehensive suite of features in all areas of information management enabling you to consolidate all your enterprise solutions into a single, manageable platform.

Below are five specific ways in which SharePoint Products and Technologies can save you money:

**1** Reduce IT costs and complexity, by consolidating multiple product investments into a single infrastructure, by reducing infrastructure and support costs, and by getting all your enterprise solutions under a single product license.

**2** Reduce development costs, by using comprehensive out-of-the-box components, by using built-in integration with the Microsoft Office 2007 suite, and by using the .NET Framework object models to reduce learning curves and development time.

**3** Simplify management and training, by providing a single, easy-to-use interface for end users and for IT administration and governance.

**4** Improve employee productivity, by implementing collaboration workspaces, self-service Web publishing, social computing features, and business process workflow and forms.

**5** Enhance the effectiveness of customer service and sales teams, by aggregating critical information from across the enterprise and by providing rapid, easy access to information.

Speak to a DynamicPoint representative today to reduce the total cost of ownership (TCO) and maximize the return on investment (ROI) from your Microsoft Dynamics ERP platform.

## Services

Every business is unique from its strategic direction to the business challenges it faces. For organizations looking to extend the reach of their investment in Microsoft Dynamics ERP products, DynamicPoint delivers custom SharePoint solutions to meet specific business requirements. Our development team, working in conjunction with a Dynamics Value Added Reseller (VAR), will build a web-based application that seamlessly integrates with a Dynamics ERP product and is deployed on an existing Windows SharePoint Services (WSS), Microsoft Office SharePoint Services (MOSS) or Microsoft Dynamics Portal environment.

## Our Approach

The DynamicPoint team has extensive experience in designing, developing and deploying custom solutions to enterprise tier organizations. We have taken this extensive expertise in development methodology and technological architectural best practice and applied it to a mid-size organizational approach. The end result is a team that understands the best way to develop a solution while maintaining the speed and agility to get the product out the door on time and budget.
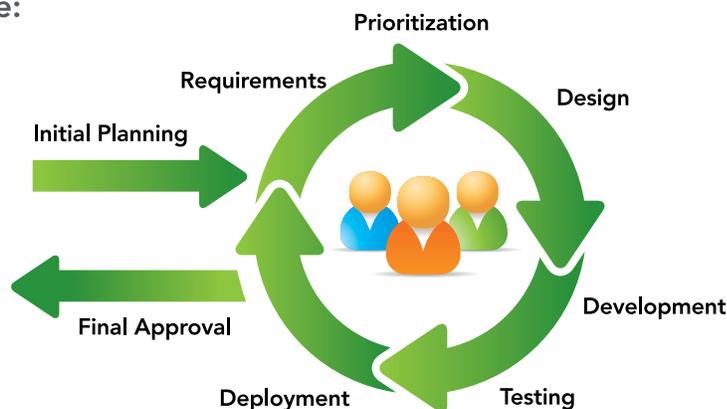

Instead of buying into a "one-size-fits-all" methodology, DynamicPoint acknowledges that each client is different and adapts its approach according to the size and scope of the project. Because of this, we have solid expertise in multiple Software Development Lifecycle models including the traditional Waterfall Model and the Iterative Model employed by popular methodologies such as Agile and Scrum.

### Software Development Lifecycle Models
**Waterfall:**

Requirements → Design → Development → Testing → Deployment

**Iterative:**

Initial Planning → Requirements → Prioritization → Design → Development → Testing → Deployment → Final Approval

## The Experience

At DynamicPoint, we are passionate about providing exceptional client service that exceeds expectations and delivers top-notch solutions. Our commitment to professionalism, constant communication, and the utilization of industry best practices provides our clients with the assurance they need that their project will be successful.
